Re: Harrah's Bay Tower II
Subject: Hi-Lite Forming Systems

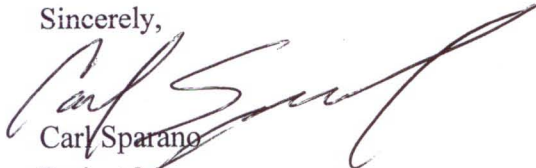

Dear Virag:

As the Concrete Subcontractor for the new Harrah's Bay Tower II in Atlantic City, we were greatly satisfied with the use of the Hi-Lite Truss Form System for the cast in place concrete decks.

Harrahs Bay Tower II is a 46 story structure in which we achieved a three day cycle on the typical floors. On the non-typical floors, the Hi-Lite Truss Form System was adjusted to accommodate the varying floor to floor heights. Directions and modifications to the Hi-Lite Truss Forming System were easily communicated to us by your technical support staff during the duration of the project.

Overall, the Hi-Lite Truss Forming System was a great benefit and allowed us to improve on the overall concrete schedule, which was welcomed by the General Contractor as well as the Owner.

Sincerely,

Carl Sparano
Project Manager
